### VALUE OF PRODUCTION.

Prior to 1933-34 the value of production was calculated on a gross basis for primary industries and on a net basis for factories, and consequently on account of the duplication involved the values shown could only be accepted as a rough index of the change from time to time. Arising out of a series of conferences held by Australian Statisticians it is now possible to exclude production and marketing costs and present the values on a net basis for all branches of production excepting Fisheries. In Tasmania, the costs of production for mining have not been computed nor has the output of quarries been collected, but these omissions tend, more or less, to balance out. No deductions from the figures have been made for maintenance costs of farm buildings and fences or for depreciation. The figures have been prepared by the State Statisticians, largely from collected data. Where this has not been possible careful estimates have been made from the best available sources.
